

Location-tracking Trial

A research trial by Health Data Insight (HDI)

What is it?

We are testing an **indoor location system** that measures where tagged items are within the lab.

You'll see three kinds of small device:

Anchors

12

Ceiling / wall units in fixed positions.

Hubs

3

In fixed positions; they process the collected data.

Beacons

4+

Small & movable — the items we're tracking. Starting with four; more later.

Is it safe?

- **Yes.** It uses standard low-power Bluetooth — as in a mobile phone or wireless earbuds.
- All mains-powered equipment is CE and new or PAT approved.
- It does **not** interfere with clinical or laboratory equipment.
- It is **not** connected to the CUH network.

Does it record personal data?

No. The trial records the position of the beacons only.

How can you help?

✅ **Please do...** Move the **beacons** around within the trial area!

⚠️ **Please don't...** Unplug, move, cover or switch off any of the **anchors** or **hubs**.

Any questions?
